BUGS:

HomePanel
  ~~! Weekly Planning still has _____~~
  ~~Print Shopping list prints the entire year (should only be a week) (just a label issues)~~
  ~~! Your profile shows 1 less person than it should (nevermind, wording confussion)~~

EditRecipePanel.java
  ~~Nutrition Fact Names are editable~~
  ~~! NullPointerException on line 43 of Measurement.java when unused lines are in the ingredients~~
  ~~! Add/remove ingredients not working with editing an already existing recipe~~
  ~~! Delete button not removing recipe from manage recipes~~
  ~~Ingredient Amount will take only a number (This is supposed to happen)~~
  Ingredient Amount should have some clarification about using a unit too
  ~~! "Create a new meal plan" is misleading. Could it be "Add to a new meal"?~~
  Recipe names 3-5 characters should probably be allowed
  Creating a new recipe with the same name as an existing recipe overwrites the original with no warning. (is this correct behavior?)
  "Add to new meal" not validating (allows for empty ingredients to be submitted)
  "Add to new meal" does not save (is this correct?)

Manage Recipe
  ~~! Delete button sends you back to the home page~~

Manage Meals
  ~~Meal names in the list should have the date (just ignore this)~~
  ~~! Replace the word "menu" with "meal" in the instructions~~
  Add a "Manage Available Recipes" button (not required)
  ~~! Remove "plan" from "Create a new meal plan..."~~
  ! Need a view goals section
